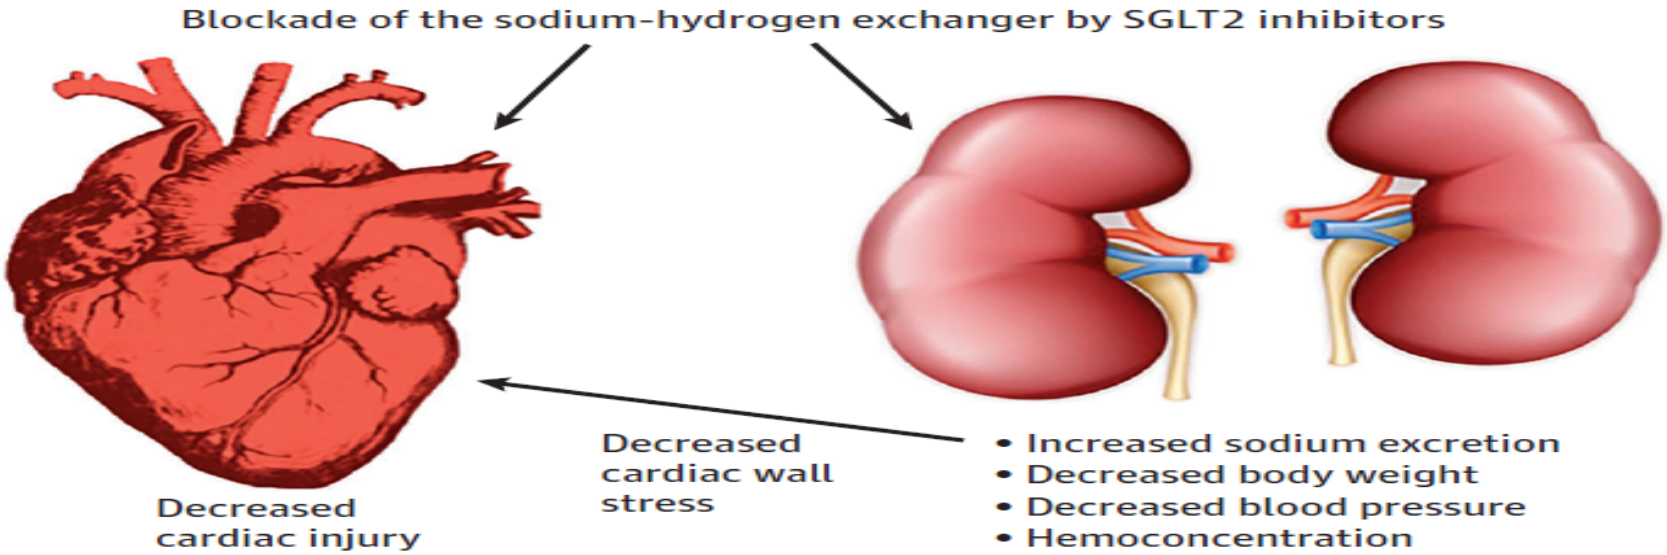
Mecanismos Cardíacos: Sodium-Hydrogen Exchanger

Figure. Cardioprotective Effect of Sodium-Glucose Cotransporter 2 (SGLT2) on Sodium-Hydrogen Exchange in the Heart and Kidneys



- It has been shown that the action of empagliflozin to inhibit the NHE leads to a reduction in intracellular calcium.
- Inhibition of NHE has been shown to minimize cardiomyocyte injury and to attenuate the development of cardiachypertrophy, fibrosis, remodeling, systolic dysfunction and heart failure.
